

uber

Uzer is a web and mobile application that allows regular people and organizations to share their wireless/data network to numerous paying customers which generates income from them.

Want to hear the story about how we
came up with this product?

Features

Unlocked features

Through Uzer, the owner of the router will share their wireless network connection in return for money. The owner can set up parameters for the user in order to ensure safety, such as the length of use and the amount of data allowed for use.

Ratings system

Our rating system allows the owners to get the best possible feedbacks about their Internet usage and state while making sure to indicate to users which providers offer the strongest and fastest possible connection allowing the app users to feel more at ease and safer towards the usage of the Uzer app.

Benefits

With Uzer, people who travel abroad will no longer have to pay ridiculously expensive roaming fees to use Internet. Owners can cut back on their monthly wireless & data costs by putting the money earned through Uzer towards their Internet bills and potentially generating extra income for them.

Pricing

The Uzer Plan

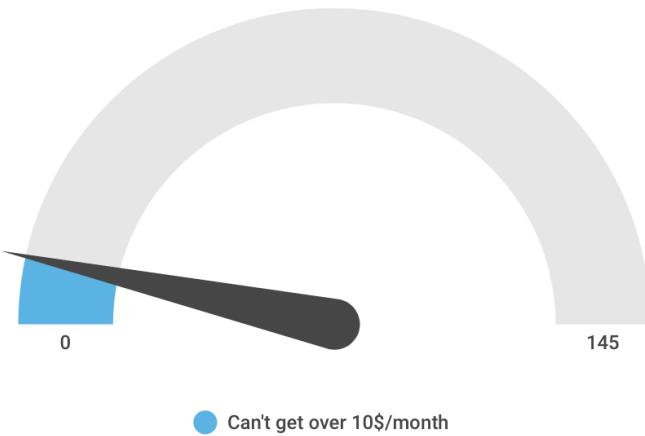

It's totally free when the Internet speed is less than 40 Mpbs! It can't get over 10\$/month if you use unlimited Internet speed at over 40 Mpbs! It's simply the best financial decision you can ever make in your lifetime. Hands-down.

Typical Providers' Plan

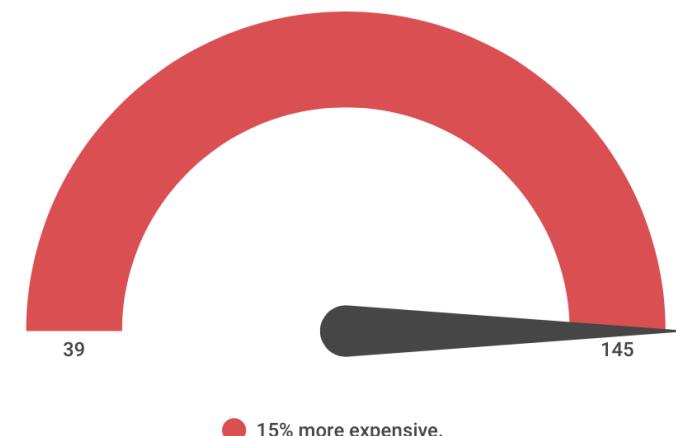

Typical network providers normally overcharge people for faster network speed (Mpbs) and those expensive roaming fees can get over 140\$ a month. It's over 15% more than what we would make you pay for Unlimited Wifi speed > 40 Mpbs.
